

Last session : SONAR QUBE

-> Sonar Qube software is used to perform Code Review

-> Using Code Review we can easily identify the mistakes we have done

-> Using Code Review we can improve code quality and our coding skills

Realtime Workflow

-> Every developer is responsible to perform code review in local machine

-> Every developer should maintain sonar server in local so that we can perform code review

-> Once our code review completed we need to make sure Code Quality Gate is passed

-> Once Code Quality Gate is passed, then we will push our code to GIT

-> We will use Jenkins Jobs to deploy our application into environment

-> In Jenkins Job Sonar will be configured to perform Code Review.

Last session : SONAR QUBE
