

//We need to prepare query dynamically to retrieve data

```
public List<InsurancePlans> findPlans(SearchCriteria sc){
    StringBuilder sb = new StringBuilder("SELECT * FROM ED_ELIG_DTLS where 1=1");
    if(sc.getPlanName()!=null){
        sb.append(" AND PLAN_NAME='"+sc.getPlanName()+"'");
    }
    if(sc.getPlanStatus()!=null){
        sb.append(" AND PLAN_STATUS='"+sc.getPlanStatus()+"'");
    }
    if(sdate!=null && edate!=null){
        sb.append(" and plan_state_Date<=sdate and plan_end_date <=edate");
    }
}
```

```
select * from ed_elig_dtls where 1=1 and plan_name='SNAP' -- plan name
select * from ed_elig_dtls where 1=1 and plan_name='SNAP' and plan_status='AP' - name
& status
selec * from ed_elig_dtls where 1=1 and plan_status='AP'
```
