```
Yesterday's session : Edit and Delete Functionalities

Today's session : Soft Delete
-----------------------------------------------------------

-> In every application 'Delete' operation will be available.

-> We can implement 'Delete' operation in 2 ways

        1) Hard Delete
        2) Soft Delete

-> Hard Delete means deleting record permanentley from Database using 'delete' query.
If we do hard delete then we can't get that record back.

-> Soft Delete means making record as In-Active. It will be available in Database.
When we want we can get that record back. Soft Delete we will implement using 'Update'
query.
```
