```
Yesterday's session : AR module details
---------------------------------------
-> AR module is used to verify citizen is eligible to apply for the plan or not

-> If citizen belongs to RI state then he can apply for plan in IES. If citizen not
belongs to RI state then he can't apply for plan in IES.

-> AR module will interact with SSA-WEB application for verification purpose.
(Webservice communication).
======================================================================

-> Once application registration is completed, data collection is going to start.

-> Data collection module is used to collect citizen information to apply for plan

-> In DC module, the first screen is used to create case for the citizen.

-> For Every Citizen case no will be allocated.

-> After Case Creation, DC module will display 'Select Plan' screen. Here Based on
Citizen intrest Case Worker will select plan.

-> Based on Plan Selection, DC module will display next screens to collect the data

SNAP ----> Income details
CCAP ----> Child details
RIW ----> Education details
Medicare ----> Property and age details

-> All these details will be stored in Database tables.
```
