Yesterday's session : Login and Forgot Password functionality

Today's session : Applicaton Registration

-> Application Registration module is used to determine weather a citizen can apply for a plan in IES or not.

Note: Only Rhode Island state citizens should apply for plans in IES.

-> As our application is intranet application, Case Workers will apply for plans in IES on behalf of Citizens.

-> If citizen wants to apply for a plan, then citizen should visit nearest DHS office.

-> Case Worker will login into IES, will start application registration process for Citizen.

-> As part of application registration process, IES will communicate with SSA-WEB-APP to retrieve citizen state name based on citizen SSN.

-> If citizen belongs to Rhode Island then application registration will be completed successfully and App Reg No will be generated for citizen.

-> If citizen not belongs to Rhode Island then application registration will be stopped and Citizen can't apply for plan in IES.

Requirement : Develop SSA-WEB apllication with below functionalities
----

1) SSN Enrollment : It will take citizen data as input and it will generate and provides SSN NO.

input data
----
firstname
lastname
gender
dob
statename

output

SSN

2) SSN Verification : It takes SSN No as input and it provides citizen data.

Input

SSN

Output
----
firstname
lastname
gender
dob

```
statename
```
